

*The best in indoor air comfort.*

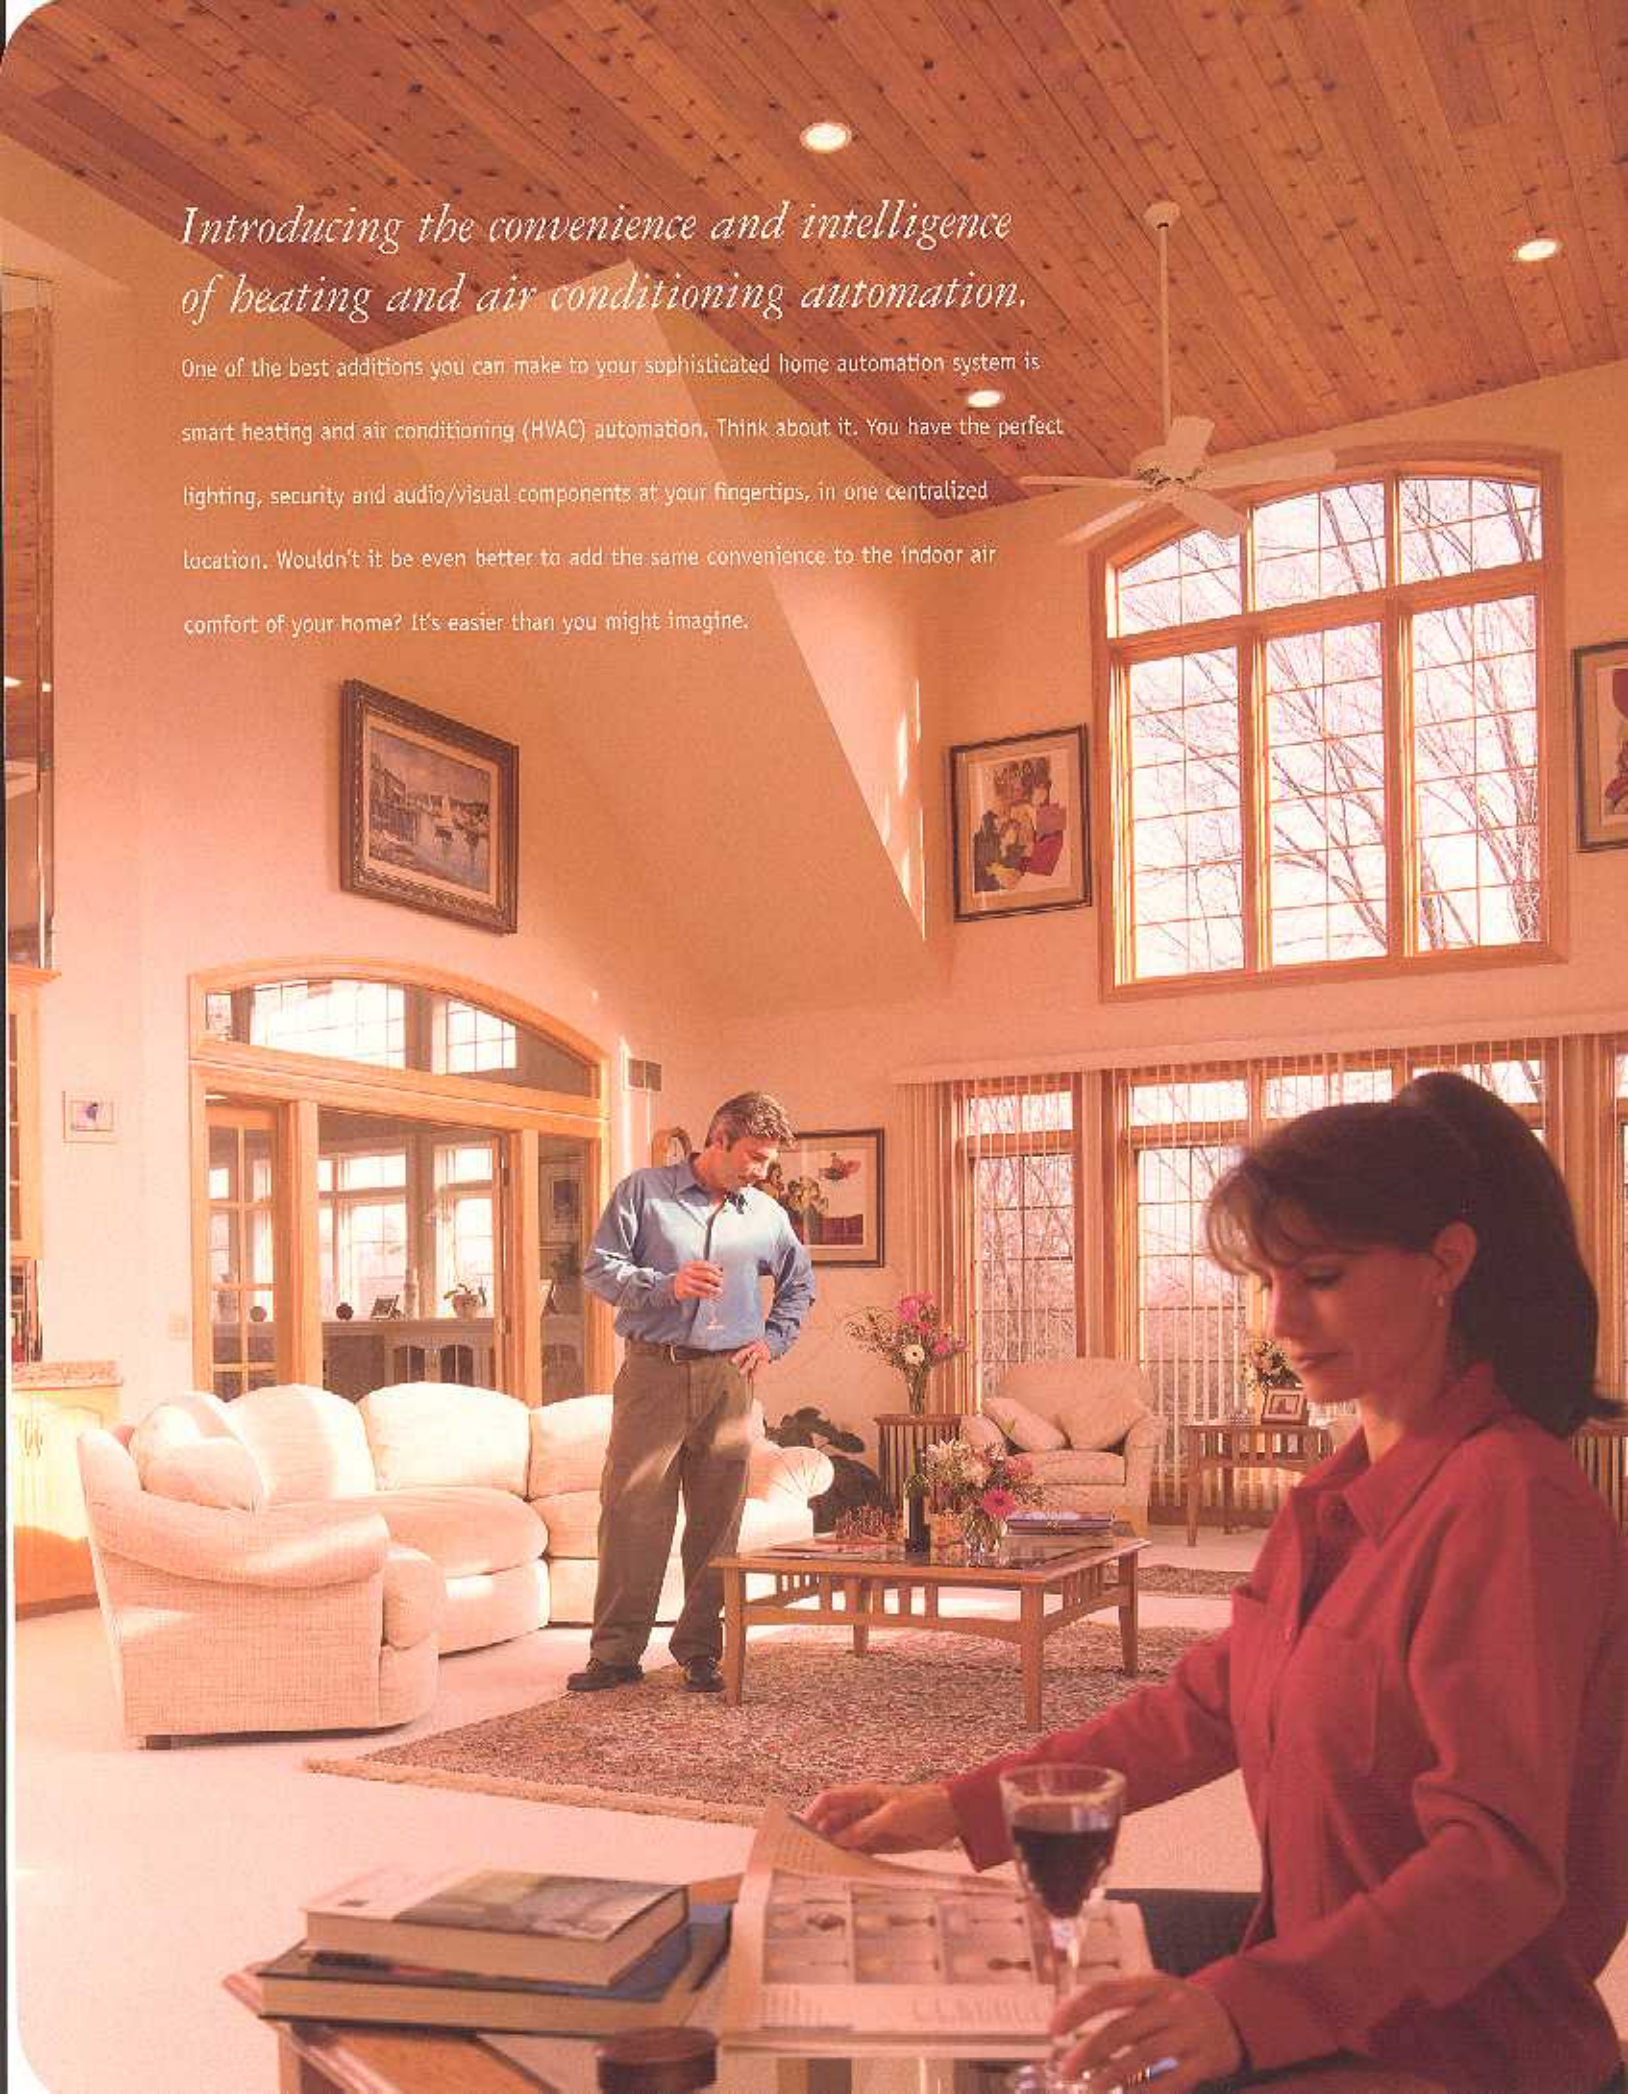

*Automated Heating & Cooling*

**Aprilaire<sup>®</sup>**

*Introducing the convenience and intelligence  
of heating and air conditioning automation.*

One of the best additions you can make to your sophisticated home automation system is smart heating and air conditioning (HVAC) automation. Think about it. You have the perfect lighting, security and audio/visual components at your fingertips, in one centralized location. Wouldn't it be even better to add the same convenience to the indoor air comfort of your home? It's easier than you might imagine.

## *Taking home automation to the next level.*

*OK. So you have all of your systems:* audio/visual, appliances, telephone, surveillance, lighting and security, controlled from one central location. But you still have to get up, walk around to each thermostat and reset or program them all? Not anymore. With Aprilaire® as a part of your home automation, you can have the same flexibility and control with heating and cooling, as your other systems. And it's completely compatible with standard automation packages, allowing you the true possibility of total home automation. Effortlessly.

There are many features and benefits of HVAC automation that can take the ordinary comfort level of your home to extraordinary, in one easy step.

**CONVENIENCE** Complete system information from all your communicating thermostats on the central system panel, at a glance and at your fingertips.

**INFORMATION** The thermostat message screen allows for any custom information to be displayed. With the complete system, you can set your thermostat to receive temporary messages like caller

ID, weather data, security systems status – all from a convenient message display that keeps you up to date.

**STYLE** The thermostat's attractive design looks good on any wall, with any décor. And for those locations that are aesthetically sensitive, the thermostat can be tucked away and you could use the option of a virtually invisible flush-mount sensor.

**PERFORMANCE** You also get peace-of-mind knowing the thermostat can operate independently from the central system. In addition, temperature settings can be customized within the system to fit your lifestyle, for an additional increase in energy savings.

When you're considering features for your home's automation system, don't forget the intelligence of HVAC automation and the sophistication of Aprilaire.

*The convenience of intelligent communication.*

The cornerstone of HVAC automation is the Aprilaire® Communicating Thermostat. It offers centralized convenience, integrated text messaging, attractive, sophisticated design and the peace-of-mind of stand-alone performance.
